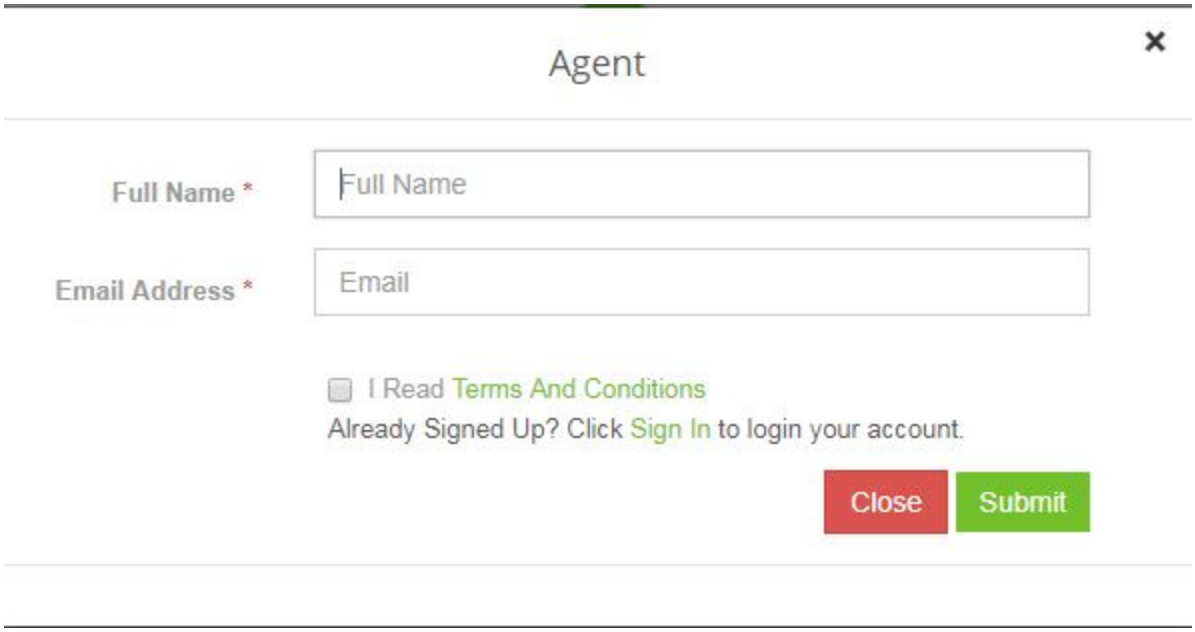
Az_testing_001_12202017

This is the end to end testing of agent side of things. This is in addition to what was already shared before

Issue 1: split names

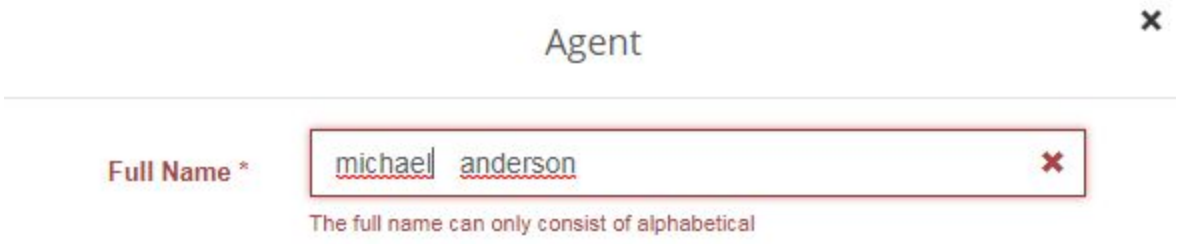
Trying to sign up as az

Split the name into 3 fields. fn,mn,ln



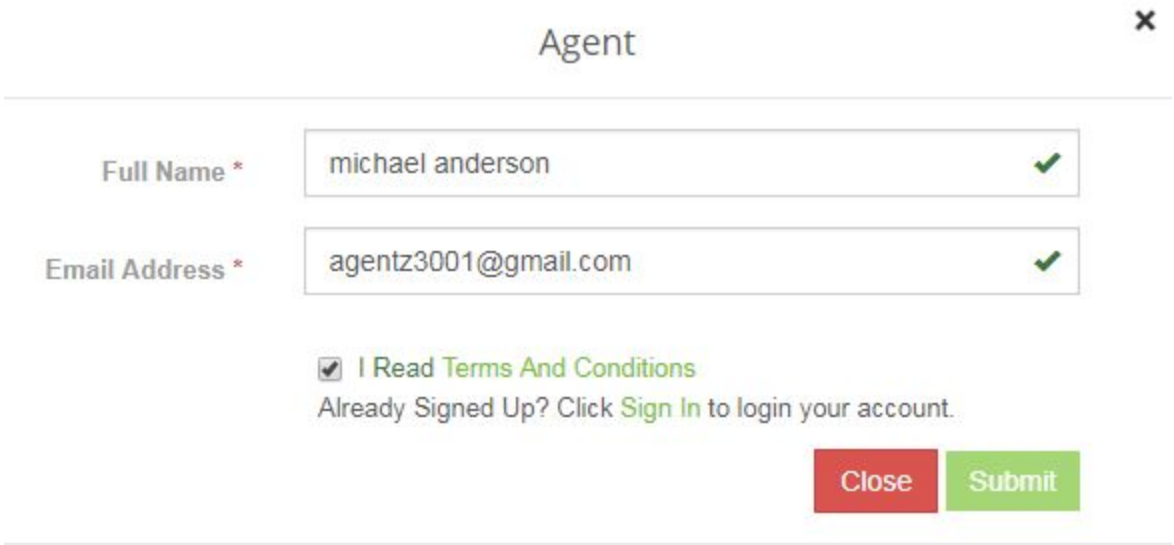
Issue 2: Name validation

If you split the name into 3 fields this issue will resolve

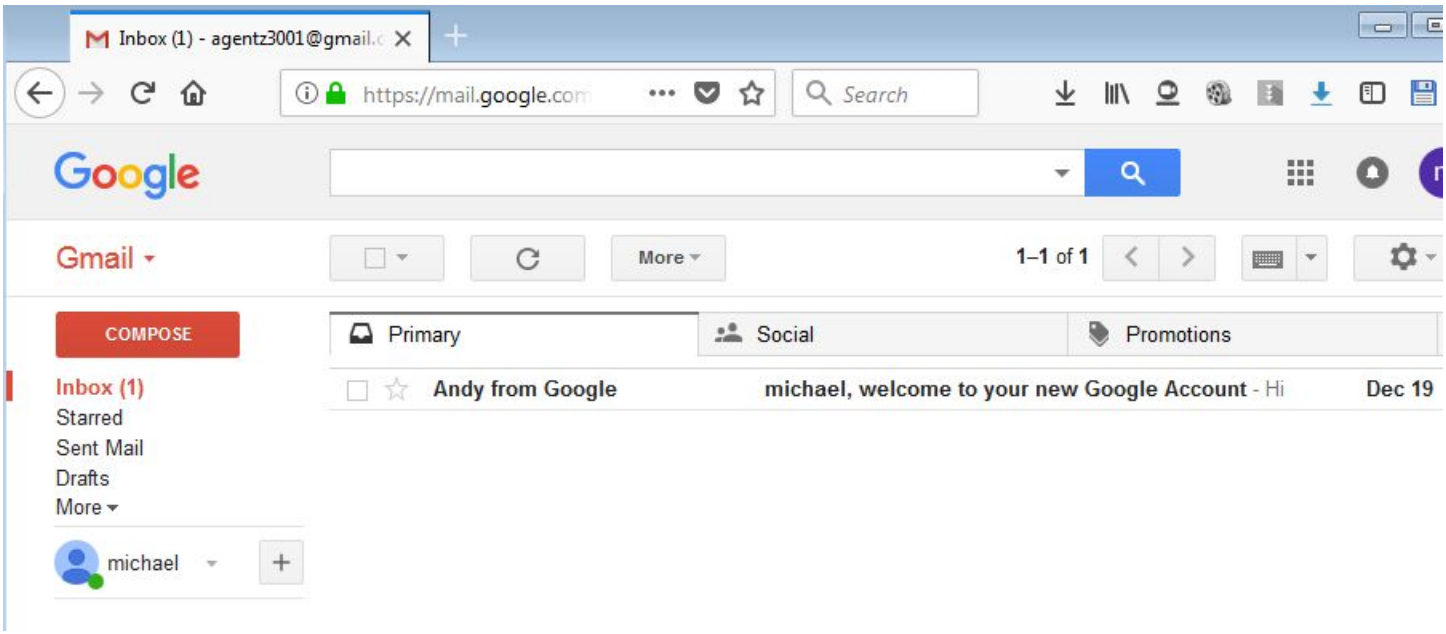


Issue 3: submit button is disabled

Entered name like below , entered email address, click submit. The submit button is disabled, no email from the site see below.



No email from site

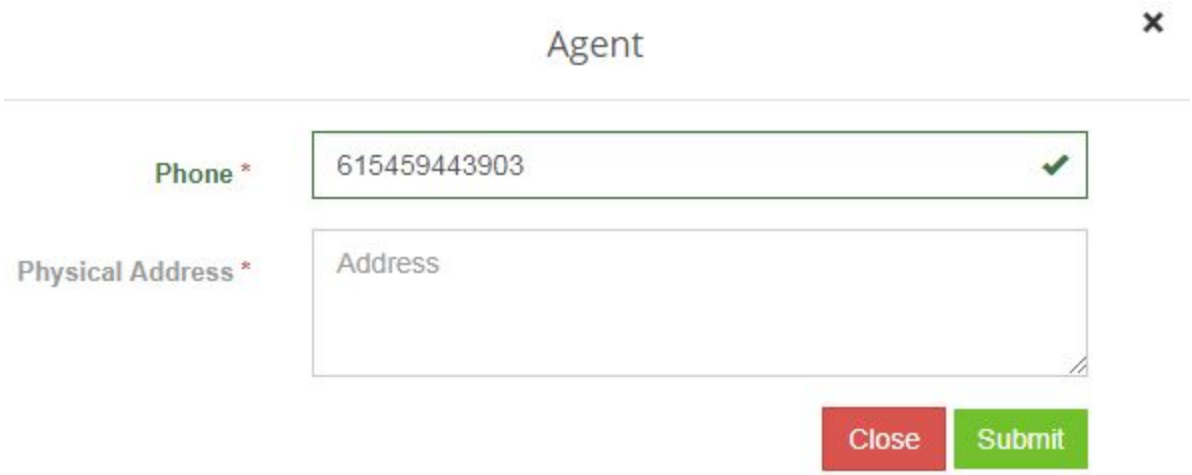


Issue 4: Home/office address, phone

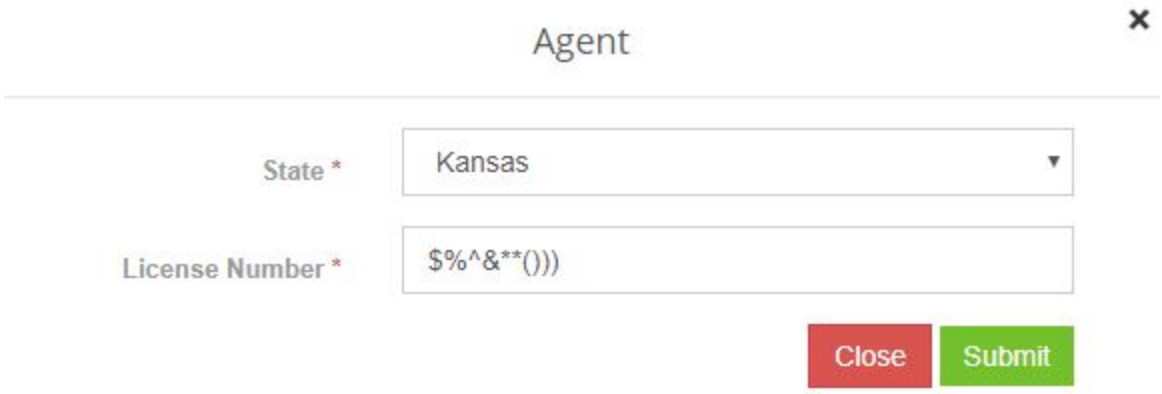
Split the address into
Address line 1
Address line 2
City
State
ZIP Code

Validate the phone
The phone number below is wrong. It has to many digits

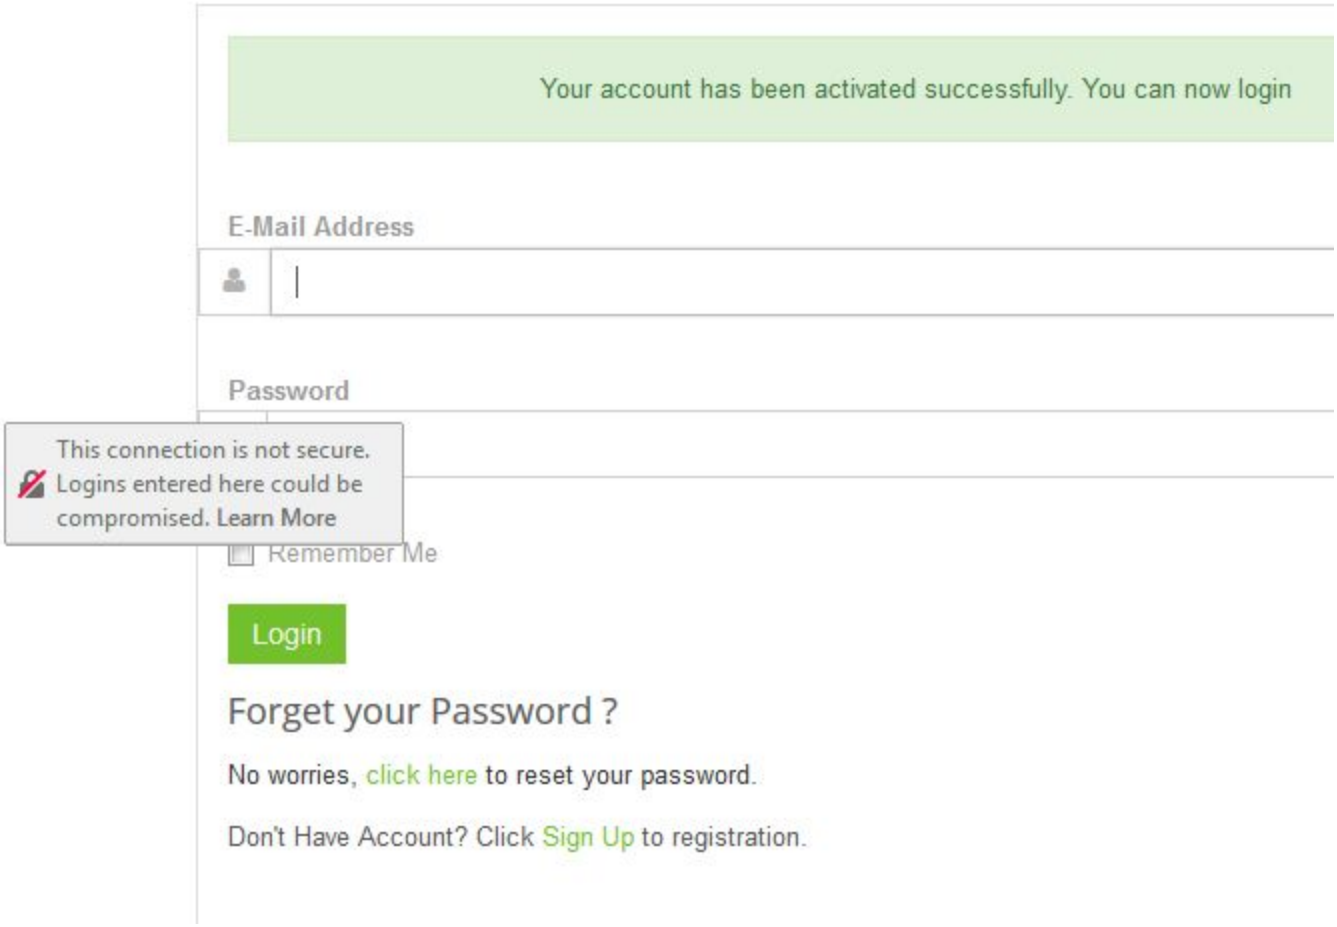
Either let the users type only 10 digits or you format the the phone after he typed like (615)594-3903



Issue 5: license number cannot contain special characters

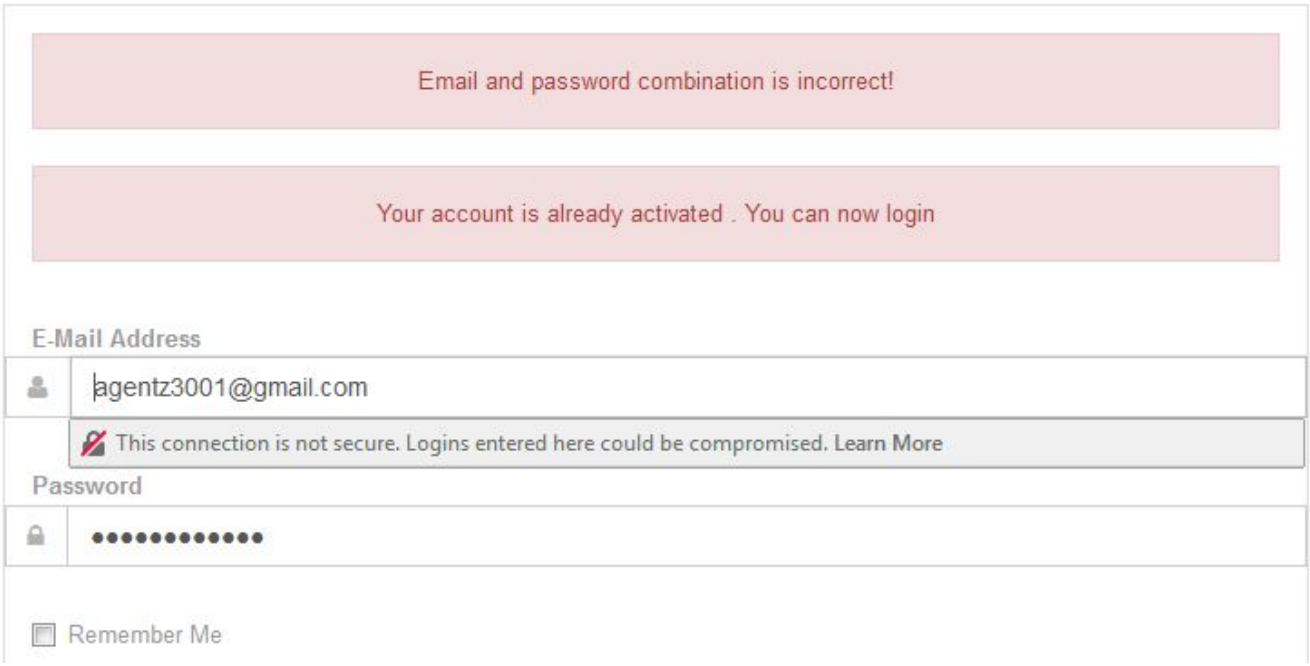


Issue 6: will need SSL

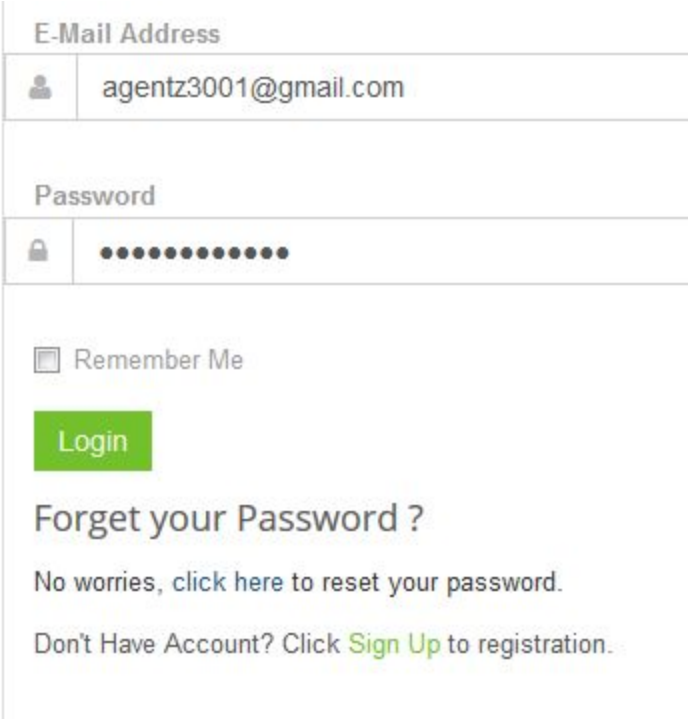


Issue 7: try to login the bad password

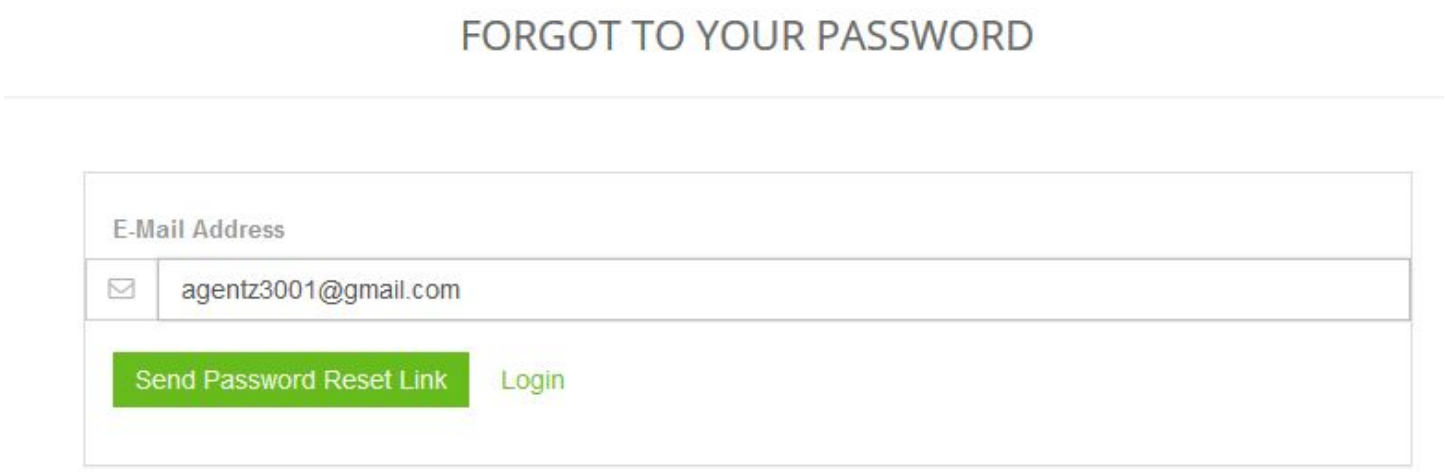
See the second message below that message should not have been there.



Issue 8: reset password not working. New agent sign up

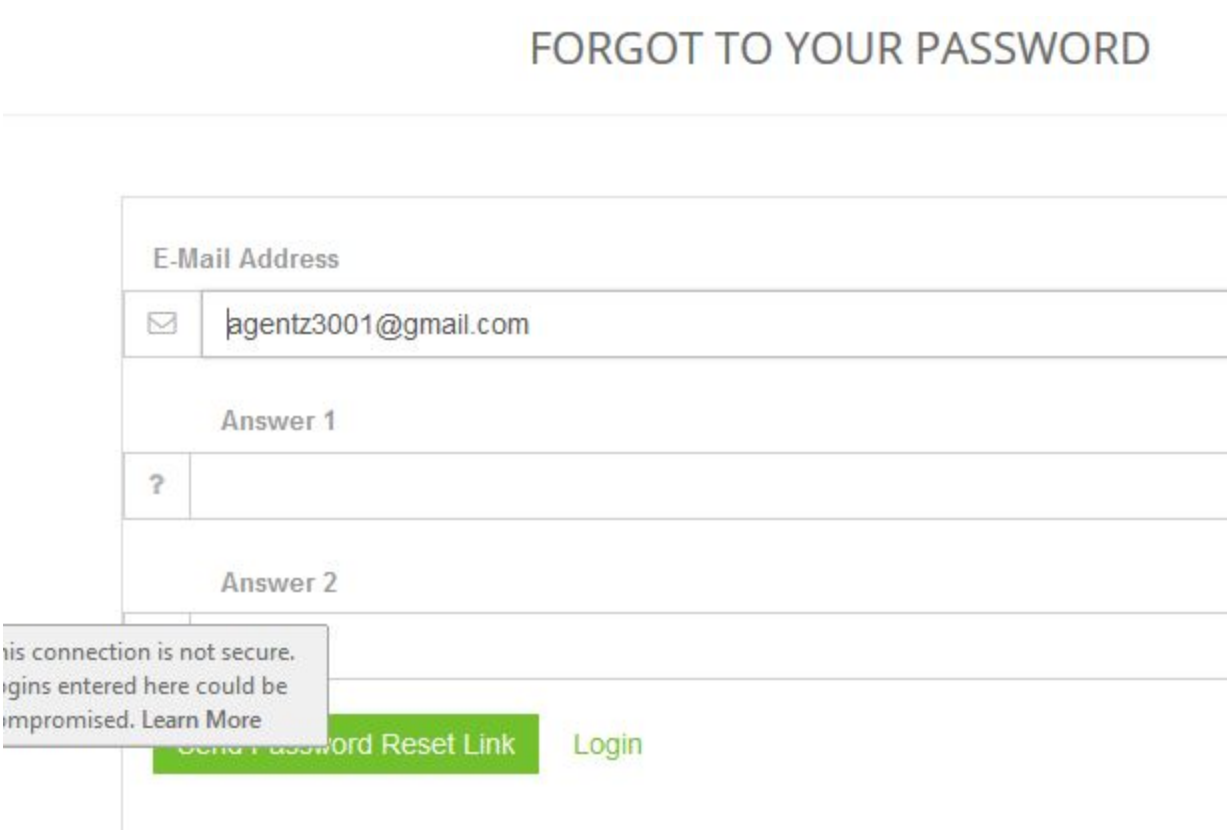


Click the reset password link it takes me to the page below



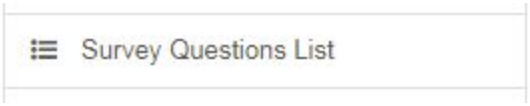
No enter the email address, click password reset link, it takes me below. This is wrong. It should simply send me the password reset link to my email address. or a new temporary password should be sent to the email because I am a new user

If a user already exist then he might've set up the security question and answer then in that case you can allow them to reset the password using the security question and answer.



Issue 9: Survey

Remove survey from sz/bz/az it's a admin functionality
Admin send a survey question as a popup once in a while when a sz/az/bz logs in. Its tracked so the same question is not asked to the same sz/bz/az. This concept was explained in one of the videos. Lets keep the survey as the last piece.



Issue 10: Proposals creation

Proposals can be uploaded or be created like the profile

A single html text box if it has the ability to create something like a pdf proposal with multiple sections.

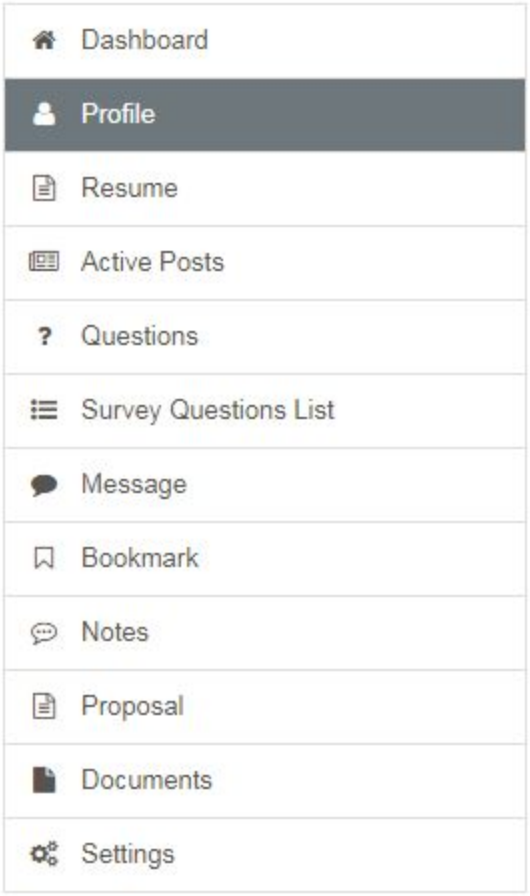
Or

Ability to add a sections (a html text box) one at a time, each section is like a paragraph

Lete discuss some ideas on how to pull this off

Issue 11: random clicks takes me to login page

Like i clicked on 'Resume' it crashed. Minor bugs like this exists thru out the site



Issue 12: combining/renaming the 3 main parts of the agents profile

These 3 seems to be clunky. Az will get confused as why there are 3 parts.
Let's discuss this

Issue 13: sharing the proposals

This list is tied to the search screen. Without some form of filtering there will be too many sz/bz to send the proposal to.

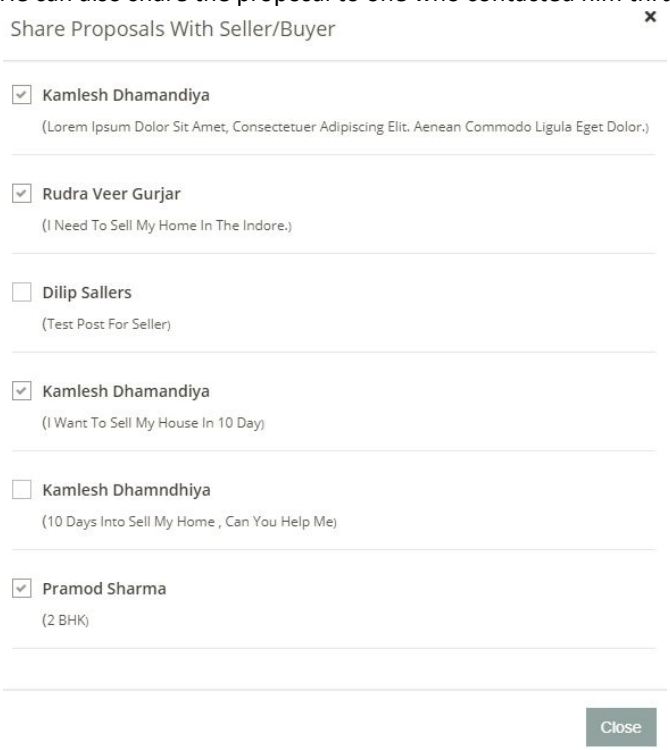
Each proposal is customized to that particular sz/bz. There could be some proposals that are very specific.

There should be a way to create and share such specific ones.

The az should be able to create and share a proposal to one or many sz/bz. How many comes from search screen

Search screen lists those in a zipcode, those who contacted him today/lastweek/some date range, those who made a new sz/bz post etc etc. What is filtered from the search is where he shares the proposal.

He can also share the proposal to one who contacted him thru messaging (this should be in the search screen)



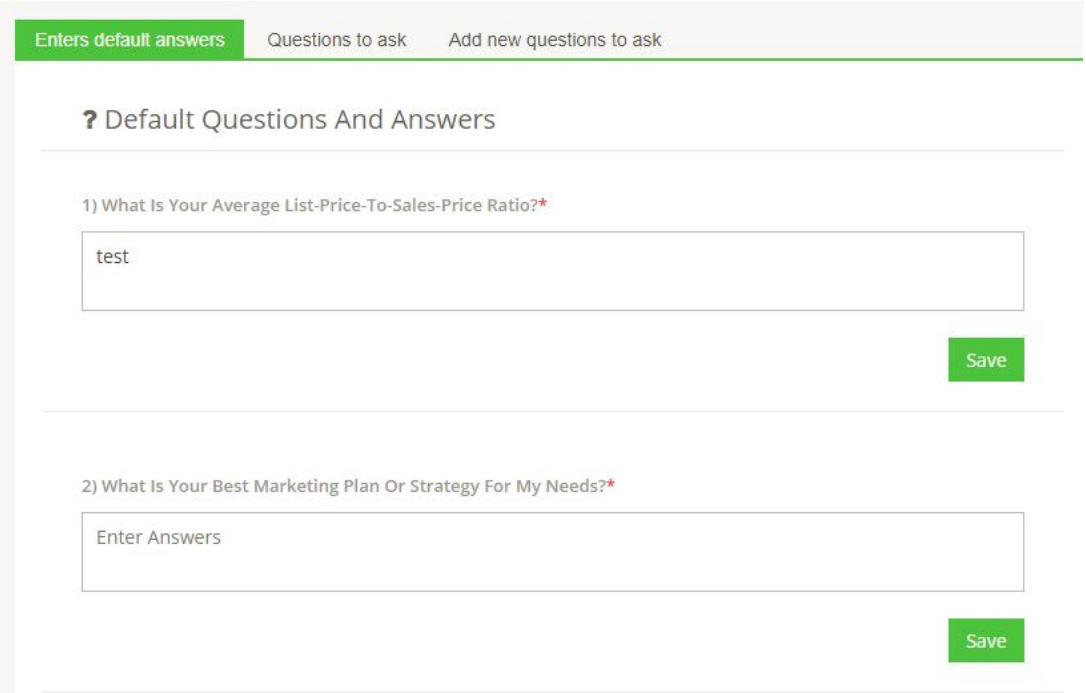
Issue 14: Questions

How does a az shares the questions with the sz/bz ?.

Lets say a bz asks about the commision or hvac (air conditioner) or anything else how does the az communicates with him ?

How a az shares say 10 common questions with some sz's ?
Because some questions will be common and some will be very unique like a homes in a cul-de-sac (its a dead end road) he should be able to answer any and all questions.

How does a az identifies whom to share the question/answers ?.



Issue 15: Notifications

Admin should be able to decide what to be notified

For example in this case below if we show the ratings to the az he will get demotivated and may not respond.

Rating for individual items like answers,proposals etc are not to be shown to the az from sz/bz

Final rating after the home sale should be shown (its like rating the Ola ride)

Let’s clarify any questions you might have in this
