

HydroFuel App

1. Personal Info Page

Personal Info Page

Change heading “Suggested quantity of water” to “Suggested Daily Target”

Feature:

Ability to increase or decrease the “Suggested Daily Target” Amount.

Functionality

Create and add a minus button before the displayed measurement and a plus button after as pictured here.

Tapping the Minus button will remove 500ml from the ‘Suggested Daily Target’

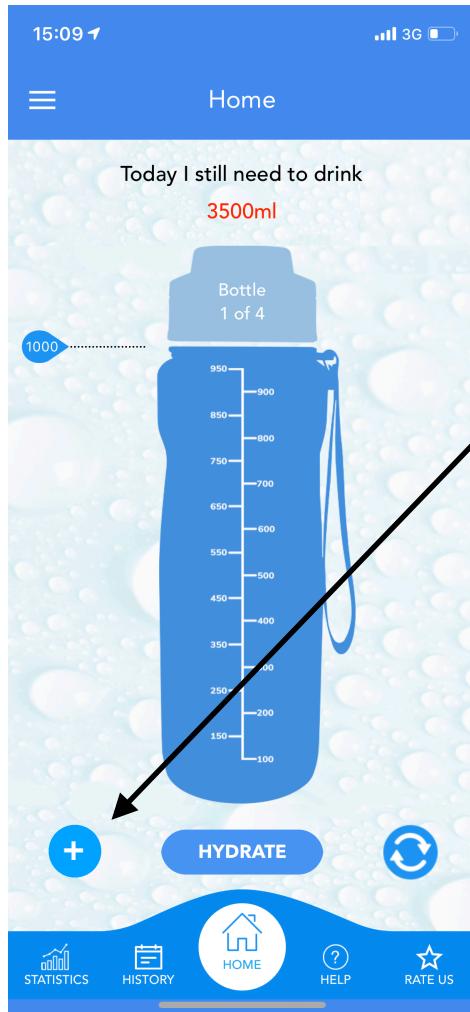

Tapping the Plus button will remove 500ml from the ‘Suggested Daily Target’

Set limits so users can not edit to go below 500ml.

Design

Use the same colour and create a blue circle with relevant minus or plus symbol.

1. Home Page

HOME Page

Feature:

Allow users to add how much they have drank so they can track what they've drunk.

Functionality

Add button to come screen (pictured), This plus button when clicked will come up with a selector.

The user selects how much they want to add. The selector will be in 50ml increment starting at 50ml going up to 3000ml. e.g 50ml, 100ml, 150ml and so on.

Press add drink

The bottle level and water level indication will update to show how much has been drunk.

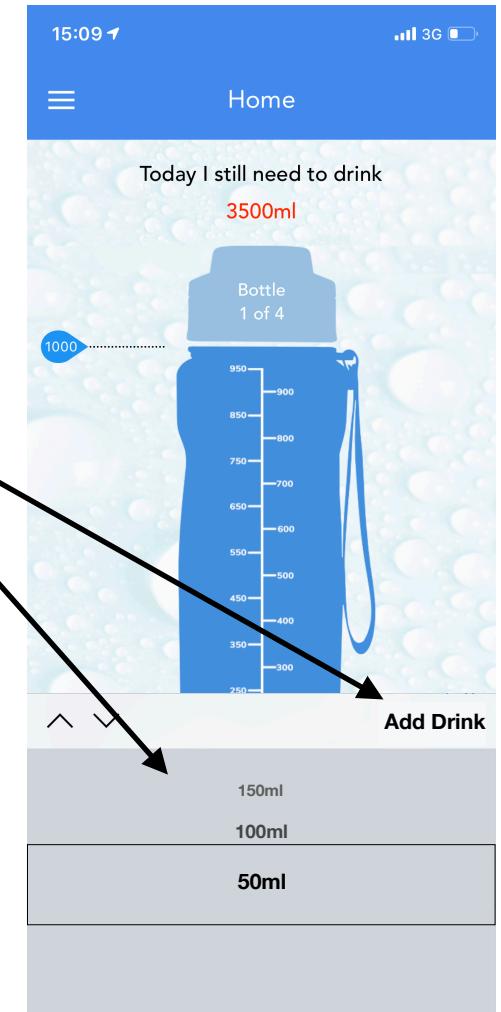

The “Today I still need to drink” Will update to show the new amount.

The amounts on notifications will change to reflect the new amount needed still to be consumed.

Design

Use the same colour and create a blue circle with relevant plus symbol inside.

The sector will be a slider feature.

WALKTHROUGH WHEN STARTING APP

All features must be updated on the walkthrough when first opening the app so users know how they work.

Add steps for:

Suggested Daily Target feature

- “Use the plus and minus buttons to edit your daily target”

Notes: Add this step after the step showing you your suggested daily target

For Add A Drink Feature

- “Tap the plus button to add a drink to your daily activity”

Notes: Add this walkthrough step AFTER the Hydration button step but BEFORE the Reset Button Walkthrough.

EDIT Step for:

Change Hydrate button walkthrough to:

“If you’ve drank the amount suggested in your notification just open the app and press ‘hydrate’”

Notes: Change existing walkthrough for the ‘Hydrate’ button feature.
